Visual Evidence

One observed moment

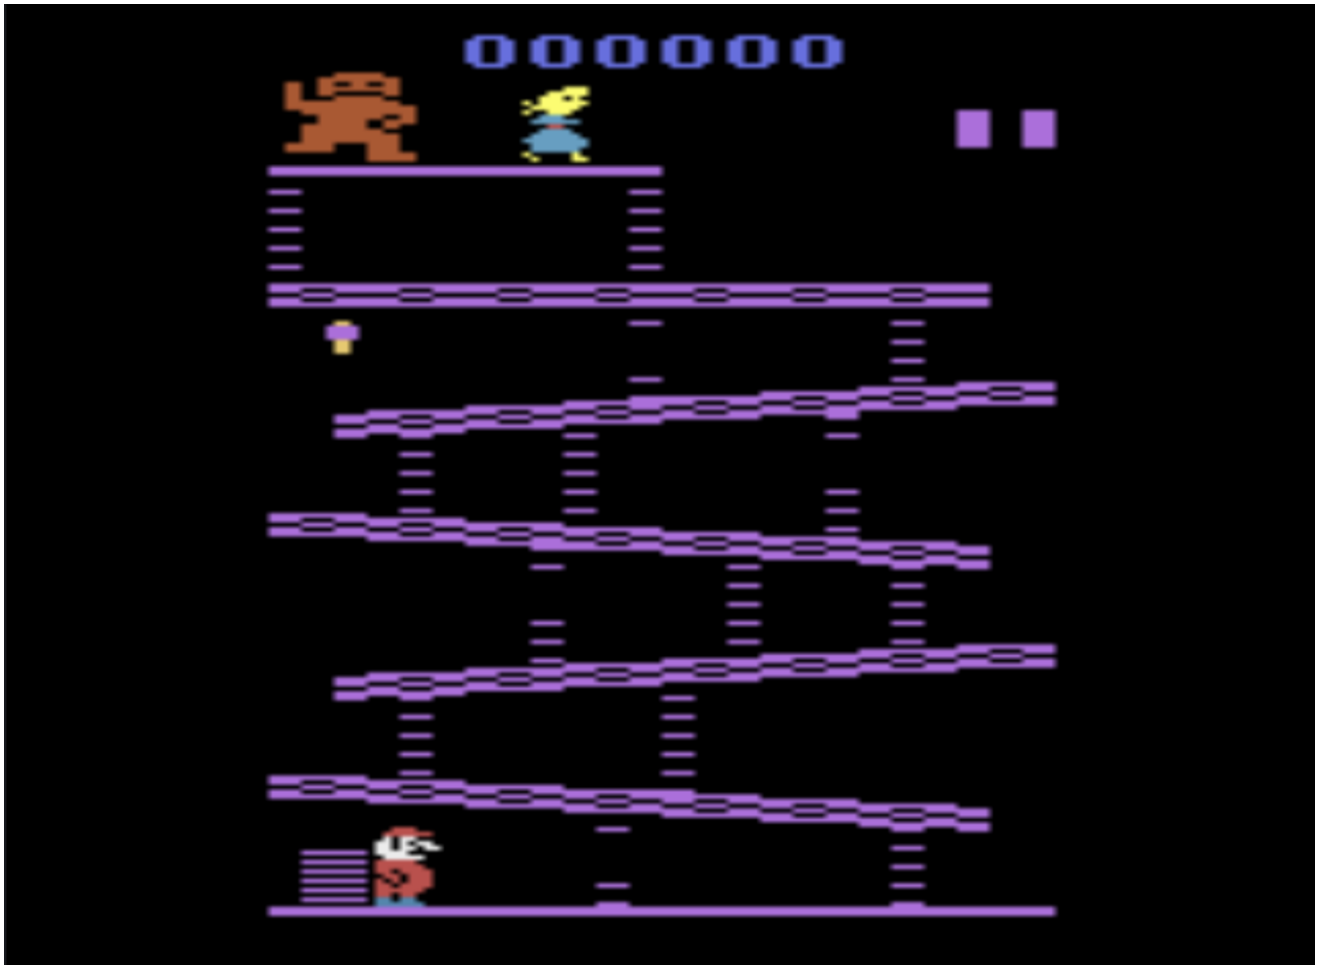

Image evidence prompt

Submit one original screenshot or still of your Case Study 1 Atari game. Caption it with the title, version or platform when known, the scene shown, and its source. A relevant image from your first case study may be reused.

Requirements and potential deductions

- The image shows the original scene used for this redesign. (up to -0.5 points)
- The caption identifies the selected Atari game, scene, and image source. (up to -0.5 points)

Caption: PlayClassic Atari2600 Donkey Kong, Very start of the Game

Visual Redesign

Improvement goal

Response prompt

Identify one visual problem in the original scene and explain the mood or player experience your redesign should support. Refer to a specific detail in the original image.

Requirements and potential deductions

- Identifies a visual problem using a specific detail from the original scene. (up to -0.75 points)
- Explains the intended mood or player experience of the redesign. (up to -0.75 points)

Submitted response

One of the only problems I can really identify from a coloristic standpoint could be the way Donkey Kong and Pauline are prese
One additional thing may be the lack of color distinction between the platforms and the ladders. Some slight adjustment in the
coloring of the ladders can help break up the monotone look of the layout, recoloring or adding more color to Donkey Kong in t
more dark warm colors can further show that he's the main antagonist.

Revised palette

Response prompt

List your proposed colors and their roles, including any neutrals. Explain why this palette size and a named color relationship suit your improvement goal, and how contrast makes an important element stand out. Color names or swatches are sufficient; exact color codes are optional.

Requirements and potential deductions

- Identifies the proposed colors and what each is used for. (up to -0.5 points)
- Justifies the palette size and a named color relationship using the improvement goal. (up to -0.75 points)
- Explains a contrast choice that makes an important element stand out. (up to -0.75 points)

Submitted response

For Donkey Kong I'd say a maroon or almost any shade of a dark red could add more depth to the visuals of his "model." For t
ladders I'd say something within the same range of the purple but maybe a little lighter, if the goal is to stick to the theme I'd sa
pink. Having the platform also be dark wouldn't work since the background is black it would have the inverse effect of the desir
"bring MORE attention to the ladders as something important and useful."

Redesigned scene

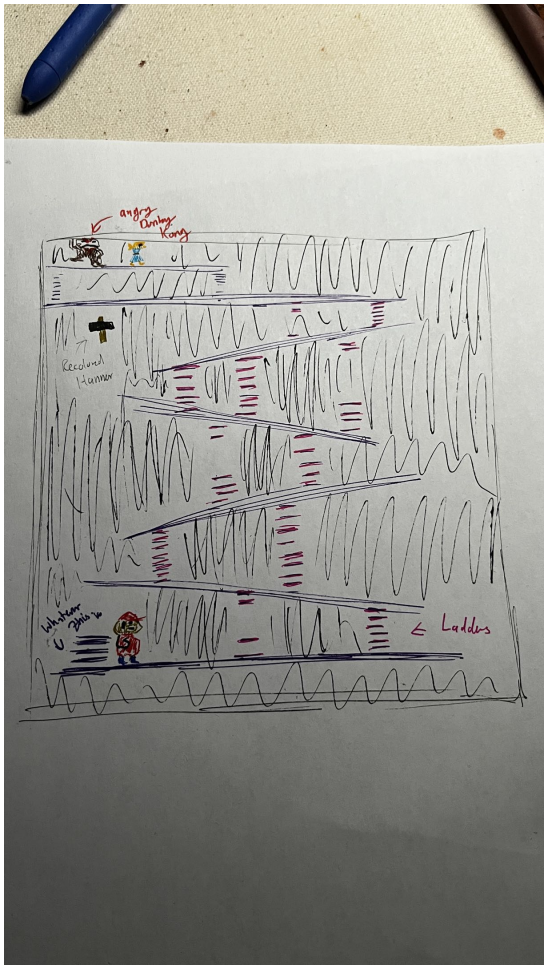

Image evidence prompt

Submit a colored sketch, annotated recoloring, or mockup of the same scene using your proposed palette. Include a gameplay element and an interface or state indicator. Keep an important state understandable without color alone, using a label, shape, or icon. Caption the image to identify the scene and your changes.

Requirements and potential deductions

- The redesign applies the proposed palette to the same scene's gameplay element and interface or state indicator. (up to -1.25 points)
- An important state has an understandable label, shape, or icon in addition to its color. (up to -1.25 points)

Caption: The Ladders are pink, Donkey Kong has some red accents, and I also recolored the hammer I didn't notice earlier because it was also purple.

Look and feel decision

Response prompt

Explain one visual change beyond the palette, such as composition, interface layout, character shape, or an animation you would add. Connect it to a relevant Chapter 6 concept from vision, interface, ambience, or storytelling and explain its intended effect on the player. Describe motion in words if your sketch cannot show it.

Requirements and potential deductions

- Connects a specific visual change beyond the palette to a relevant Chapter 6 concept. (up to -0.75 points)
- Explains how that change would affect the player's experience. (up to -0.75 points)

Submitted response

Only other thing I would add is possibly add some variety to the background, some animated grey squiggles shifting up when t music picks up or down when it drops a bit. Nothing too violent or crazy, just slight change and motion so that the background i just void.

Evaluate the redesign

Response prompt

Compare your redesign with the original scene. Explain how the revised visuals work together to address your improvement goal while keeping the game's core actions and rules. Refer to a specific difference visible in the two images.

Requirements and potential deductions

- Evaluates the combined effect of the revised visuals on the improvement goal using a specific

before-and-after difference. (up to -0.75 points)
- Explains how the original core actions and rules remain intact. (up to -0.75 points)

Submitted response

Sine everything is done in pen squiggles, the minor improvements aren't really noticeable however I absolutely stand by the ide
the ladders could use a different hue. The ladders stand out as an interact-able section of the level unlike the purple pile of line
the start. It doesn't impact the core game mechanics, the ladders are still ladders and everyone probably knows to use them ho
the visuals are more defined.
